

Color adjustment

TPCA

Course objectives

The delegates will learn how to solve color problems by means of simple and fast color adjustment. Educational methods, tools geared to the rate of learning and a careful balance between theory and practice enable them to adjust colors quickly, and to calculate and re-use their own mixing formulas.

Target group

Experienced spray painters and color matchers familiar with waterborne and solventborne paints and with color retrieval and color matching.

Duration

3 days
(duration depending on practical exercises)

Number of delegates

6 maximum

Content

Health & Safety (TPHS)

Color Adjustment (TPCA)

- Color basis
- Colorimetry introduction
- Factors influencing colors
- Introduction to adjustment
- Rules for adjusting colors: solid, metallic, pearl-effect

Educational tools and methods

- Fine balance between theory and practices
- Practical exercises in workshop on relevant car bodies or panels
- Discussion and exchanges
