# SCOPE

## Organisation & Performance

Perfection made simple

# SCOPE :

## Optimisation of your work space, down to the smallest detail

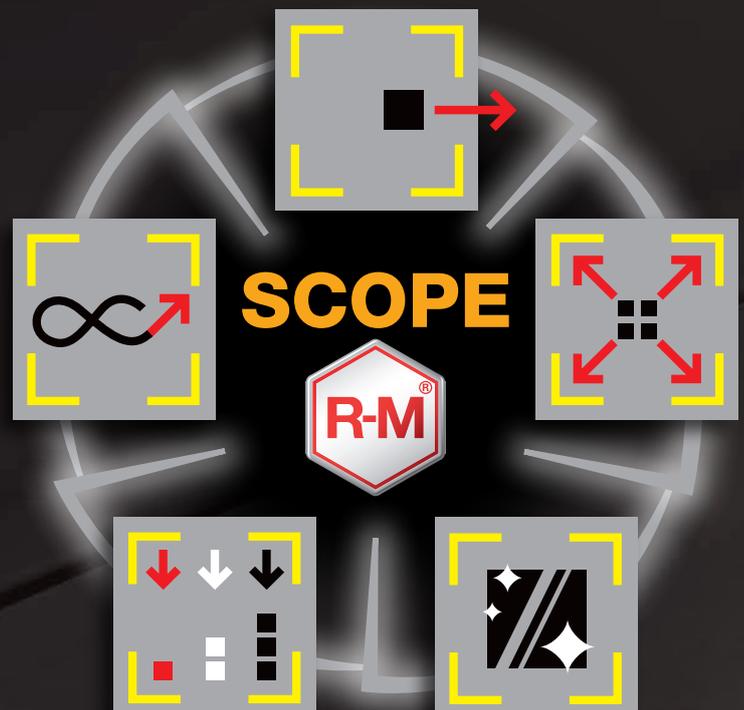

SCOPE is an R-M Programmes For Success service module. It is a part of the continuous improvement approach, with the aim of providing you with sustainable **results in organisation and cost control, lead time, quality as well as safety** for your bodyshop.

### Benefits : clean ultra-functional work stations that will generate :

- Productivity gains depending on the station (reduction in movements and time spent searching for tools or consumables).
- Better working atmosphere, higher quality and safety.
- More productive space in the workshop, increased operator comfort, better workflow and more motivation for the technicians.
- Stock and equipment inspection made easier.
- Reinforcement of your company image.
- A solid basis for a continuous improvement approach.

Rigorous method tailored to your bodyshop, for sustainable optimisation: eliminating what is not necessary, defining a designated place for each thing, reducing sources of dust, standardizing and ensuring long-term viability.

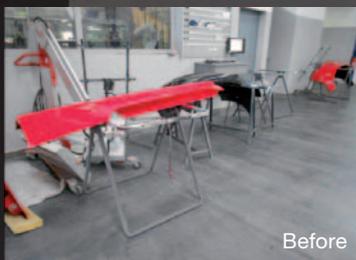

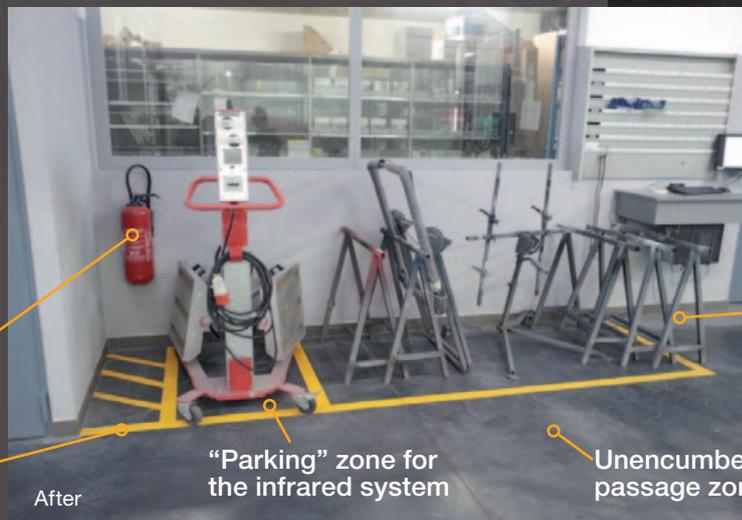

## The vital aspects to consider :

- Effective arrangement of mobile equipment (film and paper dispensers, trolleys, infrared systems...).
- Intelligent storage methods (tools, consumables).
- Optimisation and tracking of work, passages and storage zones.
- Methods to consistently maintain the bodyshop and its equipment in good operating condition.

## A perfect example :

Before

Visible extinguisher

Floor markings

After

"Parking" zone for the infrared system

Unencumbered passage zone

Easier access to trestles

■ Equipped with real industry expertise, your R-M consultant helps you to find the workspaces and other areas of your workshop that require analysis and improvement. His extensive experience of the body repair process gives him the insight to suggest relevant solutions.

■ Together, you define the steps to take to implement your project and the plan of action that best corresponds with your expectations, needs and schedule. You then run the project autonomously with the suggested tools and methods. Your consultant is available at all times to guide you along new lines of improvement and provide you with the support required for the long-term viability of your project.

## Take control of the project in 4 key stages

### 1 Preparation

Identification of your needs and definition of the objectives of the project.  
Definition of the steps to take.

### 2 Optimisation of the workspace

**Eliminate what is not necessary, tidy up, clean and organize,** following a detailed analysis of the areas of improvement.

### 3 Implementation of standards

Ensuring the long-term viability of the project (visual standards, monitoring chart).

### 4 Monitoring

The tools enable you to manage the project autonomously.
